## Election/Restrictions

- Claims 1-8, drawn to a film bulk acoustic resonator, classified in class 310, subclass 311.
- II. Claims 9-13, drawn to a method of forming a piezoelectric film device on a substrate, classified in class 264, subclass 272.11.
- III. Claims 14-22, drawn to a method of forming a device including a seeding layer, classified in class 29, subclass 25.35.
- IV. Claims 23-27, drawn to a method of forming a device requiring deposition and seeding, classified in class 427, subclass 100.
- V. Claims 29-44, drawn to a film bulk acoustic wave resonator including a seed layer and an opening, classified in class 310, subclass 311.
- VI. Claims 45-49, drawn to a film bulk acoustic wave resonator with a seed layer, classified in class 310, subclass 311.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and of Groups II-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as being capable of use together. Additionally, the method of making groups do not denote making the group I device, for example the method of making groups do not detail the specific piezoelectric material, axis orientation etc.

Application/Control Number: 10/716,750

Art Unit: 2834

Inventions of Group I and of Groups V and VI are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different effects since differently structured BAR devices are claimed.

Inventions of Group II and of Groups III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different effects. For example the group II invention does not have a seeding layer, ergo, the functionality of the devices has different effects.

Inventions of Group II and of Groups V and VI are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions. For example the group II invention is drawn to a method of making a device while the groups V and VI are drawn to a device structure, which method does not involve making the device of groups V and VI.

Inventions of Group III and of Group IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different effects. For

Application/Control Number: 10/716,750

Art Unit: 2834

example the removal of portions of the device of group III while it is being made is different than the removal of portions of the Group IV invention.

Inventions of Groups III and IV and of Groups V and VI are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions. For example the group III invention is drawn to a method of making a device while the groups V and VI are drawn to a device structure, which method does not involve making the device of groups V or VI.

Inventions of Groups V and VI are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different effects since they are comprised of different materials. For example, the group V materials include one of AIN or ZnO and a C-axis orientation for the piezoelectric material. The Group VI invention does not note these material structures but does include some circuitry, that being the RF voltage attached between electrodes, which voltage group V lacks.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Page 5

Application/Control Number: 10/716,750

Art Unit: 2834

Because these inventions are distinct for the reasons given above and the

search required for most of the Groups is not required for other of the Groups,

restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have

acquired a separate status in the art because of their recognized divergent subject

matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must

include an election of the invention to be examined even though the requirement be

traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected

invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by

a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Direct inquiry concerning this action to Examiner Dougherty at (571) 272-2022.
